Technical subjects to change

1. General

The digital instrument CM 3001/3101 can be equipped with a isolated, bidirectional interface. The digital instrument is available with the RS 485 interface, the RS 2323 interface and the courant-Loop-interface (TTY). The connection of the interfaces is specify in the manual of the instrument CM 3001/3101.

2. Communications protocol

The organization of the communications protocol is conformed to DIN ISO 1745. The information message consist of the transmission control character, the command an the optional datas.

The instrument CM 3001/3101 gives a answer to each command. A host wait for the answer and devaluate them.

Transmission parameters

baud rate: : 300, 1200, 2400, 4800, 9600, 19200
parity : no
data bits : 8
stop bits : 1

Transmission format:

SOH	D	D	STX	C	C	C	X..X	ETX	BCC
-----	---	---	-----	---	---	---	------	-----	-----

Significance of the sign:

SOH (ASCII 01) : start of heading
D : adress (decimal) of the instrument
STX (ASCII 02) : start of text
C : command signal sequence
 : optional datas
ETX (ASCII 03) : end of text
BCC : control byte

ACK (ASCII 06) : positive acknowledge from the receiver
NAK (ASCII 21) : negative acknowledge from the receiver

Generation of the control byte:

Carry out a exclusive-OR operation (XOR) for all bytes between STX (exclusive) and ETX (inclusive). The byte can be used direct as the control byte, if the value is higher as 32. If the value of the control byte is lower as 32, it must be added 32 to them.

Possible message formats

Return of datas:

STX	X..X	ETX	BCC
-----	------	-----	-----

Positive acknowledge:

ACK

Negative acknowledge (Errors):

NAK

Reasons of a negative acknowledge (Errors):

- command is unknown
- datas are wrong (to short or to long)
- datas contains wrong signs
- datas lies out of the value range
- wrong control byte

Reasons for an error message

- command is unknown
- data lies outside the valid value range
- data are wrong (too short or too long)
- the instrument CM 3001/3101 is in the programming mode
(Each command is received with a NAK, when the instrument is in the programming mode)

-----	---	---	---	-----	-----

Explanation of error word register

Error word register	Significance
0	no error
10	command unknown
11	datas are wrong (to shortz)
12	datas are wrong (to long)
13	datas contains wrong signs
14	datas lies out of the valid value range
15	wrong control byte

A error word be preserved as long as the error word register is read through. After the reading the error word register is cleared.
